LED AD PRO

Logo guide · brand mark, meaning, colours and usage · v1, November 2026

THE IDEA

Nine LED diodes. The mark is a 3×3 grid of round LED dots, the real diodes every screen LED AD PRO sells is built from. Five pink dots light up to draw an **L** (LED), and the top-right dot glows **cyan**: the “on” light of a screen, and the one detail the eye goes to first. In motion, the dots switch on one by one and the cyan light keeps a slow glow.

The wordmark is set in Inter Display Black, outlined, tightly spaced. **LED AD** in deep navy carries trust; **PRO** in pink carries energy and makes the name memorable.

WHY IT BUILDS TRUST AND AUTHORITY

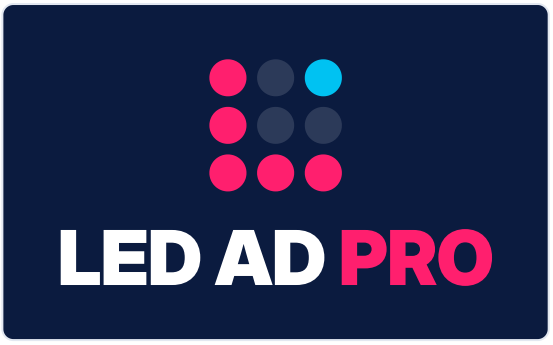

Principle	How the logo uses it
Processing fluency	People judge simple, easy-to-read shapes as more familiar and trustworthy. The mark is nine dots and the name is one heavy sans-serif: readable at a glance, from a phone icon to a 40-foot screen.
Order and stability	An even dot grid, equal spacing and a solid baseline signal structure and reliability, the qualities a client wants when booking media.
Colour roles	Deep navy is widely used by banks, airlines and media owners for trust and competence. Pink is the attention colour; used only on PRO and the L, it stays distinctive without looking unserious.
Isolation effect	One different element in a set is remembered best. The single cyan pixel is that element: the logo's "spark", and a link to LED AD PRO's original cyan.
Category fit	It looks like what the company does: lit LED diodes on a screen. Clients understand the business before they read the name.
Weight = confidence	A black (heaviest) weight with tight tracking reads as bold and established, like the wordmarks of large international media and out-of-home companies.

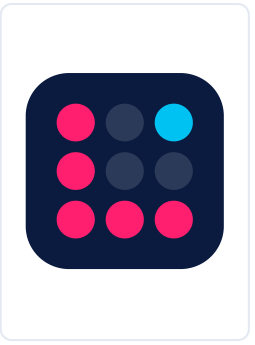

INTERNATIONAL STANDARDS IT MEETS

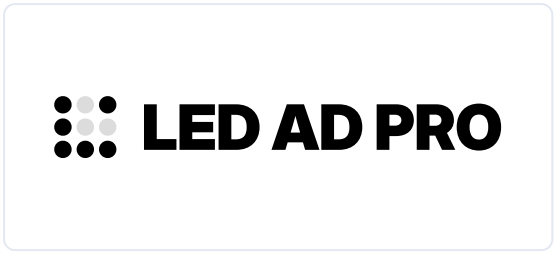

- **Scalable vector** (SVG) with outlined text: no font needed, sharp at any size.
- **Works in one colour** (black, white) for print, embossing, vinyl cutting and fax-style documents.
- **Small-size test:** the app icon reads at 16 px; the horizontal logo at 120 px wide.
- **Contrast:** navy on white 16.9:1, pink on navy 4.6:1, cyan on navy 8.0:1.
- **Clear space and minimum sizes** defined below; no gradients, shadows or effects, so it prints and screens the same everywhere.

LOGO SET

COLOURS

Trust Navy
HEX #0B1B3F · RGB 11 27 63
CMYK 83 57 0 75

Signal Pink
HEX #FF1F6E · RGB 255 31 110
CMYK 0 88 57 0

Power Cyan
HEX #00C2F2 · RGB 0 194 242
CMYK 100 20 0 5

CMYK values are conversions; match pink and cyan to a printer's proof before large print runs. Yellow (#FFD60A) stays a website accent, not part of the logo.

CLEAR SPACE AND MINIMUM SIZE

Clear space: keep empty space around the logo equal to one LED dot of the mark on every side. **Minimum size:** horizontal logo 120 px / 25 mm wide; mark or app icon 16 px / 6 mm.

DON'T

Don't stretch, recolour, rotate or add effects. Don't place the colour logo on pink or busy photos; use the reverse or mono version instead.
